**Sai Bhagvatham** Nov 02 2022 Sai Bhagvatham is a story of man's engagement with God. The book uses over a thousand personal spiritual experiences and anecdotes that record inner experiences of persons wrestling with their religious circumstances. The experiences, drawn from all religious traditions, are evocative of how the divine engages with man. The experiences with Sri Sathya Sai Baba are juxtaposed with the narratives of spiritual experiences recorded by seekers over the millennia. The experiences with Sai are uncannily similar to the universal experiences of man with God; they mirror man's journey to the Divine. The spiritual journey with Sai is tangible, poignant, accessible, and more intense than recorded before. Sai is relentless in the pursuit of his purpose, transformation of man, however much man falters, vacillates, resists, struggles, or even tries to escape. Sai demonstrates that in the relationship of man with the Divine, God is actively engaged with man; he is not an impassive bystander. The engagement of man with God is planned and activated by God, it progresses based upon the responses of man, and the engagement stimulates the transformation of man. Man, in his engagement with God, asks the 'why' questions, seeking to comprehend and explain God. He is also reflective, attempting to understand himself, and realize who he really is. The diverse and innumerable first person incidents with Sri Sathya Sai Baba create a vivid characterization of the persona of Sai, hence the use of Bhagvatham in the title.

*Fisheries Development and Management in India, 1785-1986* Jul 06 2020 Fisheries play an important role in the economy of nations bordering the sea and this is especially true in a populous country like India where a large majority continues to live below the poverty line. Sea fishing has been an occupation with the coastal people of India since time immemorial forming an integral part of the maritime heritage. Mechanisation has been introduced into the marine fishing with a view to exploit the fisheries potential all along the Indian coastline of 6,500 km by overcoming the deficiencies of the centuries old traditional fishing technology and to augment fish production with a higher fishing effort and also to raise the income levels and living standards of fishermen. The present book, based on the author's doctoral dissertation, made a bold and pioneering attempt to evaluate the costs and earnings of mechanised and traditional boats for determining their relative operational efficiency and to examine intensively the effects of mechanisation on employment, income levels, consumption pattern and levels of living of fishermen and their social implications. While analysing the merits of the new fishing technology and also the reactions of different groups of fishermen to mechanisation, he spotlights the shortsightedness in the implementation of the programme of mechanisation resulting in a host of negative effects which have implications and also sets forth the valuable lessons which Indian experiences have to offer to the densely populated littoral nations in the Third World. To ensure enduring benefits to the vast majority of marine fishermen, the thesis underscores, among numerous other remedies the need for the provision of an intermediary technology, the need for the institutional support and marketing network and the need for the management of fisheries resources. It also calls for the policies to bring about socio-economic development of the fishing community on par with the rest of the society. All in all, a genuine contribution to knowledge of 'grassroots' situations that will have enduring value and that can be useful in both academic and policy-formation circles.

[Babylonian Liver Omens](#) Jul 26 2019 The Babylonians were famous even in their own time for their expertise in divination, and Koch-Westenholz suggests the lack of modern scholarship from the extensive written record is because the texts are dry, monotonous, and difficult to access and because divination is thought to be simple superstition not worth serious study. She makes a beginning on the accessibility problem by presenting three texts on interpreting sheep livers as the first of a projected complete series on the divinatory texts from the world's oldest extant general library. The edition is based on a catalogue, compiled by Ulla Jeyes as part of what was to be a collaboration on the project before Jeyes' untimely death, of the collections in the British Museum. The original inscriptions are followed by transcription and English translation. Tablets are illustrated in 48 photographic plates. Livers not included. Distributed in the US by ISBS. c. *The Trees Called Śigru (Moringa Sp.), Along with a Study of the Drugs Used in Errhines* Aug 19 2021 Research on the Ayurvedic materia medica, in particular its drugs of plant origin, is a venture bristling with pitfalls despite the apparent confidence displayed in the lists of botanical identifications of medicinal plants in numerous publications on the subject. This self-assurance is unwarranted in quite a few cases, as this study will demonstrate. The majority of these lists of botanical equivalents of Sanskrit plant names are not based on own research; instead, they usually reflect a consensus reached somehow among Indian ayurvedic scholars. The course of events that resulted in this agreement remains uninvestigated. Setting aside the role of leading authorities and trend-setting publications, one of the factors involved may be the significance of a seemingly trustworthy and scientifically-looking pharmacopoeia for the Indian ayurvedici in their competition with western medicine. In this respect the developments referred to are understandable. From a strictly scientific point of view caution is required. When trying to take stock of the situation, one's attention is arrested by the prevalence of North-Indian influences and opinions in the secondary literature on the Indian materia medica. The concurrence mentioned is a North-Indian product that may be looked upon as an artefact since regional differences in the identifications tend to be disregarded. Though exceptions do occur, most often books by authors hailing from northern India fail to pay attention to the plants employed under the same Sanskrit names in southern India and areas such as, for instance, Gujarat and Orissa.
