My Dad...My Father Aug 07 2020 This book, set in the '50s through the '70s in rural South Carolina is a collection of true stories that depict what it was like to grow up during the greatest era of the United States of America. An era when love, church, family, and patriotism were the cornerstones of our society, and common sense parenting was used to raise children. I am a product of this era, and it is an honor for me to share my collection of stories with you. These stories are about interactions and events that happened in my life and how my dad's reactions, responses, and behaviors not only taught me valuable lessons but helped to shape my life forever. Each of my dad's lessons about life correspond directly with lessons taught by my Father's Word. This book has something for people at every age and every stage of life. Everyone can learn something about themselves and about life by reading these stories. As you read My Dad, My Father, I hope you find these stories to be entertaining and enjoyable. Cross-linguistic Aspects of Processability Theory Jan 12 2021 Seven years ago Manfred Pienemann proposed a novel psycholinguistic theory of language development, Processability Theory (PT). This volume examines the typological plausibility of PT. Focusing on the acquisition of Arabic, Chinese and Japanese the authors demonstrate the capacity of PT to make detailed and verifiable predictions about the developmental schedule for each language. This cross-linguistic perspective is also applied to the study of L1 transfer by comparing the impact of processability and typological proximity. The typological perspective is extended by including a comparison of different types of language acquisition. The architecture of PT is expanded by the addition of a second set of principles that contributes to the formal modeling of levels of processability, namely the mapping of argument-structure onto functional structure in lexical mapping theory. This step yields the inclusion of a range of additional phenomena in the processability hierarchy thus widening the scope of PT.

V.L. Parrington Feb 10 2021 H. Lark Hall presents the first comprehensive biography of Vernon Louis Parrington (1871-1929). The recipient of the 1928 Pulitzer Prize in history for the first two volumes of his *Main Currents in American Thought*, Parrington remains one of the most influential literary and historical scholars of the early twentieth century. Parrington was a man in search of a personal myth. He found his self-image successively mirrored in Victorian novels, painting, poetry, populism, religion, the arts and crafts movement, American literature, and American history. These changes were also reflected in his teaching as a professor of English - at the College of Emporia, the University of Oklahoma, and the University of Washington. Published late in his career, the two volumes of *Main Currents* represented the culmination of his search. Drawing upon his personal papers - including correspondence, diaries, and student course work, *Main Currents* chapter drafts, and other unpublished writings - Hall traces Parrington's intellectual development from his Midwestern childhood through his mid-life engagement with English poet and artist William Morris, then from the radical impact of "the new history" to the tempered post World War One reflection of his career at the University of Washington. Hall's reinterpretation of *Main Currents* emphasizes Parrington's concern with the drama of the life of the mind and links his historical viewpoint to his own personal history.

First Semester Aug 31 2022 Jessica Restaino offers a snapshot of the first semester experiences of graduate student writing teachers as they navigate predetermined course syllabi and materials, the pressures of grading, the influences of foundational scholarship, and their own classroom authority. With rich qualitative data gathered from course observations, interviews, and correspondence, Restaino traces four graduate students' first experiences as teachers at a large, public university. Yet the circumstances and situations she relates will ring familiar at widely varying institutions. *First Semester: Graduate Students, Teaching Writing, and the Challenge of Middle Ground* presents a fresh and challenging theoretical approach to understanding and improving the preparation of graduate students for the writing classroom. Restaino uses a three-part theoretical construct—labor, action, and work, as defined in Hannah Arendt's work of political philosophy, *The Human Condition*—as a lens for reading graduate students' struggles to balance their new responsibilities as teachers with their concurrent roles as students. Arendt's concepts serve as access points for analysis, raising important questions about graduate student writing teachers' first classrooms and uncovering opportunities for improved support and preparation by university writing programs.

Integrating Library Use Skills Into the General Education Curriculum Dec 11 2020 This provocative new book will help you design and implement the most effective library user education possible—one that builds on basic library use skills through a progressively sophisticated program that is fully integrated into course curriculum at all levels, from the freshman year to graduation and beyond. By exploring major issues underlying the integration of library use skills and research methodologies into the general education curriculum, contributors raise important questions, offer creative ideas, and provide insight into the many improvements made in library instruction in the past few years. Following an introduction by Patricia Breivik, a recognized national authority on libraries and general education, contributors representing two- and four-year institutions and research universities discuss such issues as the relationship between high school and college programs, research skills instruction in a remote access environment, the use of microcomputers and end user searching programs to promote critical thinking, and the improved relationship between librarians and faculty. In addition to articles on library instruction geared towards question analysis, information generation by field, structure of published knowledge and dissemination of a discipline's literature, chapters identify cooperative efforts needed among school, public, special, academic libraries and other information agencies, computer center personnel, and online database vendors. Bibliographic instruction librarians who are active participants in planning and administering library user education programs will find this volume to be essential for building and developing stronger, more integrated programs.

Undergraduate Mathematics for the Life Sciences Apr 02 2020 There is a gap between the extensive mathematics background that is beneficial to biologists and the minimal mathematics background biology students acquire in their courses. The result is an undergraduate education in biology with very little quantitative content. New mathematics courses must be devised with the needs of biology students in mind. In this volume, authors from a variety of institutions address some of the problems involved in reforming mathematics curricula for biology students. The problems are sorted into three themes: Models, Processes, and Directions. It is difficult for mathematicians to generate curriculum ideas for the training of biologists so a number of the curriculum models that have been introduced at various institutions comprise the Models section. Processes deals with taking that great course and making sure it is institutionalized in both the biology department (as a requirement) and in the mathematics department (as a course that will live on even if the creator of the course is no longer on the faculty). Directions looks to the future, with each paper laying out a case for pedagogical developments that the authors would like to see.

Handbook for Teaching Introductory Psychology Jul 30 2022 Like its predecessors, Volume III of the Handbook for Teaching Introductory Psychology provides introductory psychology instructors with teaching ideas and activities that can immediately be put into practice in the classroom. It contains an organized collection of articles from Teaching of Psychology (TOP), the official journal of the Society for the Teaching of Psychology, Division 2 of the American Psychological Association. Volume III contains 89 articles from TOP that have not been included in other volumes. Another distinction between this volume and its predecessors is its emphasis on testing and assessment. The book is divided into two sections. Section One, "Issues and Approaches in Teaching Introductory Psychology," contains 52 articles on critical issues, such as: how to approach the course; understanding students' interests, perceptions, and motives; students' existing knowledge of psychology (including their misconceptions); a comparison of introductory textbooks and tips on how to evaluate them; test questions and student factors affecting exam performance; an overview of different forms of feedback; giving extra credit; and how to deal with academic dishonesty. Section Two consists of 37 articles that present demonstrations, class and laboratory projects, and other techniques to enhance teaching and learning in both the introductory, as well as advanced courses in the discipline. This section is organized so as to parallel the order of topics found in most introductory psychology textbooks. Intended for academicians who teach the introductory psychology course and/or oversee grad assistants who teach the course, all royalties of the book go directly to the Society for the Teaching of Psychology to promote its activities to further improve the teaching of psychology.
