*Accelerated Expertise* Feb 24 2022 Speed in acquiring the knowledge and skills to perform tasks is crucial. Yet, it still ordinarily takes many years to achieve high proficiency in countless jobs and professions, in government, business, industry, and throughout the private sector. There would be great advantages if regimens of training could be established that could accelerate the achievement of high levels of proficiency. This book discusses the construct of 'accelerated learning.' It includes a review of the research literature on learning acquisition and retention, focus on establishing what works, and why. This includes several demonstrations of accelerated learning, with specific ideas, plans and roadmaps for doing so. The impetus for the book was a tasking from the Defense Science and Technology Advisory Group, which is the top level Science and Technology policy-making panel in the Department of Defense. However, the book uses both military and non-military exemplar case studies. It is likely that methods for acceleration will leverage technologies and capabilities including virtual training, cross-training, training across strategic and tactical levels, and training for resilience and adaptivity. This volume provides a wealth of information and guidance for those interested in the concept or phenomenon of "accelerating learning"— in

education, training, psychology, academia in general, government, military, or industry.

***Creating An Accelerated Learning School*** May 18 2021 This book describes how an ordinary high school set about incorporating accelerated learning into its teaching practices and policies. Headteacher Derek Wise provides a macro view of the process, discussing the changes made across the whole school. Head of

Science, Mark Lovatt, provides a micro view, looking at ways to use accelerated learning in the classroom. Their experiences provide useful reading for any school wishing to improve the learning quality of its students. Several case studies are included to show how accelerated learning techniques can be applied to different subjects.

**Paul Virilio** Mar 28 2022 Paul Virilio is known as the high priest of speed. His discourses on speed, military technology, and modernity are highly influential among urban and cultural theorists, but he has influenced the work of many in other fields as well, including media theory, international relations, art history, cultural politics, architecture, and peace studies, to name a few. The first authoritative study of the life and work of Virilio, Steve Redhead's *Paul Virilio: Theorist for an Accelerated Culture* explains and analyses Virilio's work, correcting many mistaken interpretations that have surfaced in the literature over the years. Although now retired from his position at the École Spéciale d'Architecture in Paris, Virilio remains an active political and cultural thinker and commentator with a significant catalogue of work stretching back to the 1950s. Redhead reviews Virilio's intellectual career, from his days hanging out in an architect's office in the 1960s to his recent creation of a major art foundation exhibition on 'the accident' in the wake of 11 September 2001. *Paul Virilio: Theorist for an Accelerated Culture* is a rigorous and accessible introduction to Virilio that places him in the pantheon of critical thinkers in today's accelerated culture.

*An Accelerated Solution Method for Two-Stage Stochastic Models in Disaster Management* Jun 18 2021 Emilia Graß develops a solution method which can provide fast and near-optimal solutions to realistic large-scale two-stage stochastic problems in disaster management. The author proposes a specialized interior-point method to accelerate the standard L-shaped algorithm. She shows that the newly developed solution method solves two realistic large-scale case studies for the hurricane prone Gulf and Atlantic coast faster than the standard L-shaped method and a commercial solver. The accelerated solution method enables relief organizations to employ appropriate preparation measures even in the case of short-term disaster warnings. About the Author Emilia Graß holds a PhD from the Hamburg University of Technology, Germany. She is currently working as guest researcher on the project cyber security in healthcare at the Centre for Health Policy, Imperial College London, UK. Her scientific focus is on stochastic programming, solution methods, disaster management and healthcare.

*Generation X* Nov 04 2022 Andy, Dag and Claire have been handed a society beyond their means. Twentysomethings, brought up with divorce, Watergate and Three Mile Island, and scarred by the 80s fallout of yuppies, recession, crack and Ronald Reagan, they represent the new generation- Generation X. Fiercely suspicious of being lumped together as an advertiser's target market, they have quit dreary careers and cut themselves adrift in the California desert. Unsure of their futures, they immerse themselves in a regime of heavy drinking and working in no future McJobs in the service industry. Underemployed, overeducated and intensely private and unpredictable, they have nowhere to direct their anger, no one to assuage their fears, and no culture to replace their anomie. So they tell stories: disturbingly funny tales that reveal their barricaded inner world. A world populated with dead TV shows, 'Elvis moments' and semi-disposable Swedish furniture.

Social Acceleration Jul 08 2020 Hartmut Rosa advances an account of the temporal structure of society from the perspective of critical theory. He identifies three categories of change in the tempo of modern social life: technological acceleration, evident in transportation, communication, and production; the acceleration of social change, reflected in cultural knowledge, social institutions, and personal relationships; and acceleration in the pace of life, which happens despite the expectation that technological change should increase an individual's free time. According to Rosa, both the structural and cultural aspects of our institutions and practices are marked by the "shrinking of the present," a decreasing time period during which expectations based on past experience reliably match the future. When this phenomenon combines with technological acceleration and the increasing pace of life, time seems to flow ever faster, making our relationships to each other and the world fluid and problematic. It is as if we are standing on "slipping slopes," a steep social terrain that is itself in motion and in turn demands faster lives and technology. As Rosa deftly shows, this self-reinforcing feedback loop fundamentally determines the character of modern life.

**Accelerated Sep 02 2022 A “witty, piercingly relevant” novel of a father and son that “perfectly captures the prep school milieu” of NYC and over-medicated children (Publishers Weekly). Every afternoon Sean Benning picks up his son, Toby, on the marble steps that lead into the prestigious Bradley School. Everything at Bradley is accelerated—3rd graders read at the 6th grade level, they have labs and facilities to rival most universities, and the chess champions are the bullies. A single dad and struggling artist, Sean sticks out like a sore thumb amongst the power-soccer-mom cliques and ladies-who-lunch that congregate on the steps every afternoon. But at least Toby is thriving and getting the best education money can buy. Or is he? When Sean starts getting pressure from the school to put Toby on medication for ADD, something smells fishy, and it isn't the caviar that was served at last week's PTA meeting. Toby's “issues” in school seem, to Sean, to be nothing more than normal behavior for an eight-year-old boy. But maybe Sean just isn't seeing things clearly, which has been harder and harder to do since Toby's new teacher, Jess, started at Bradley. And the school has Toby's best interests at heart, right? But what happens when the pressure to not just keep up, but to exceed, takes hold? When things take a tragic turn, Sean realizes that the price of this accelerated life is higher than he could have ever imagined.**

***Some Characteristics of Turbulent Boundary Layers in Rapidly Accelerated Flows* Dec 01 2019 An analysis of time-mean-turbulent boundary layer velocity profiles measured in a rapidly accelerating flow suggests that the outer region of the velocity profiles consists of essentially inviscid, rotational flow. The extent of this inviscid outer region was observed in some cases to exceed 90 percent of what is ordinarily thought of as the turbulent boundary layer thickness. On the other hand, the inner frictional region of these velocity profiles appears to have turbulent characteristics similar to those of more conventional turbulent**

boundary layers. Hence, the outer edge boundary condition for this inner region is more properly the external rotational flow region than the free stream.
