The Problem of Universals in Indian Philosophy Oct 25 2019 The author gives a critical and comprehensive study of the fundamental problem of universals in Indian Philosophy. The centre of the study is the controversy between the Nyaya-Vaisesika and the Mimamsa realists on the one hand and the Buddhist nominalists on the other. The author discusses not only the epistemological and metaphysical approach to the problem of universals but also the semantic approach made by the various systems of Indian Philosophy. In this context the view of the Grammarions with special reference to Bharthari has been discussed in some detail. A brief but critical analysis of some of the main trends of thought on universals in Western Philosophy--beginning from Plato to the contemporary philosophers--has also been given. Besides his scholarly and eminently readable treatment of fundamental problem of universals, the author has attempted to give his own solution of the problem. It is based on the recurrent identities and similarities which are the principles of grouping and which form the foundation of our thought and speech.

Evaluation of Online Higher Education Jun 01 2020 The work presents a theoretical framework for the evaluation of e-Teaching that aims at positioning the online activities designed and developed by the teacher as to the Learning, Interaction and Technology Dimensions. The theoretical research that underlies the study was developed reflecting current thinking on the promotion of quality of teaching and of the integration of information and communication tools into the curriculum in Higher Education (HE), i.e., bearing in mind some European guidelines and policies on this subject. This way, an answer was sought to be given to one of the aims put forward in this study, namely to contribute towards the development of a conceptual framework to support research on evaluation of e-teaching in the context of HE. Based on the theoretical research carried out, an evaluation tool (SCAI) was designed, which integrates the two questionnaires developed to collect the teachers' and the students' perceptions regarding the development of e-activities. Consequently, an empirical study was structured and carried out, allowing SCAI tool to be tested and validated in real cases. From the comparison of the theoretical framework established and the analysis of the data obtained, we found that the differences in teaching should be valued and seen as assets by HE institutions rather than annihilated in a globalizing perspective.
