The book then discusses typical levels of common pharmaceuticals and how they can be determined in natural waters such as raw and treated sewage, and in potable water. In addition, sections examine methods currently available to degrade pharmaceuticals in natural waters and some of their ecotoxicological impacts, along with future considerations and the growing concept of product stewardship. Encompasses the full lifecycle of common pharmaceuticals, from prescription and dispensing practices to their occurrence in a range of different types of natural waters and their environmental impact Explores the role of the healthcare system and its affect on users Beneficial for environmental engineers involved in the design and operation of appropriate degradation technologies of the pharmaceutical prescription and disposal practices

Life Cycle Management Jul 19 2021 This book provides insight into the Life Cycle Management (LCM) concept and the progress in its implementation. LCM is a management concept applied in industrial and service sectors to improve products and services, while enhancing the overall sustainability performance of business and its value chains. In this regard, LCM is an opportunity to differentiate through sustainability performance on the market place, working with all departments of a company such as research and development, procurement and marketing, and to enhance the collaboration with stakeholders along a company's value chain. LCM is used beyond short-term business success and aims at long-term achievements by minimizing environmental and socio-economic burden, while maximizing economic and social value.

Developmental Theories Through the Life Cycle Jun 25 2019 In this bestselling textbook, contributors describe theories of normal human development advanced by such pioneers as Sigmund Freud, Anna Freud, Jean Piaget, Nancy Chodorow, Daniel Levinson, Erik Erikson, and Margaret Mahler. Beginning with infancy, toddlerhood, and preschool, each chapter examines corresponding ideologies concerning maturation and development in middle childhood, adolescence, adulthood, and old age, while acknowledging that no one theory can encompass all aspects of human development. In-depth analyses of the psychology and sociology of development provide educators and practitioners with insights into the specific social contexts of human behavior and help identify variables and deviations. This second edition features up-to-date empirical information, including additional studies on diverse populations, and a new chapter on attachment theory, a growing area of interest for today's clinicians.

The Life Cycle of Clusters Oct 02 2022 One-size-fits-all cluster policies have been rightly criticized in the literature. One promising approach is to focus cluster policies on the specific needs of firms depending on the stage of development (emergence, growth, sustainment or decline) their cluster is in. In this highly insightful book, these stage-specific cluster policies are analysed and evaluated. Moreover, several chapters also focus on smart specialization policies to promote regional development by taking into account the emergence and adaptation of clusters and industries. In so doing, the book contributes to a newly emerging literature on how the cluster life cycle concept can inform policies and how these policies differ from static approaches that ignore the dynamism of clusters. The underlying idea is to foster the ability of clusters to renew themselves and to generate new

developmental paths, thus preventing stagnation and decline. This state-of-the-art exploration of smart specialization from a cluster life cycle perspective is an invaluable book for academics in the fields of economic geography, entrepreneurship, innovation, industrial economics, regional studies and cluster research. It will also appeal to regional policy makers and practitioners dealing with public policy.

A Life Cycle for Clusters? Sep 08 2020 This book studies the determinants of cluster survival by analyzing their adaptability to change in the economic environment. Linking theoretic knowledge with empirical observations, a simulation model (based in the N/K method) is developed, which explains when and why the cluster's architecture assists or hampers adaptability. It is found that architectures with intermediate degrees of division of labor and more collective governance forms foster adaptability.

Human Capital Over the Life Cycle Feb 11 2021 Human Capital Over the Life Cyclesynthesises comparative research on the processes of human capital formation in the areas of education and training in Europe, in relation to the labour market. The book proposes that one of the most important challenges faced by Europe today is to understand the link between education and training on the one hand and economic and social inequality on the other. The authors focus the analysis on three main aspects of the links between education and social inequality: educational inequality, differences in access to labour markets and differences in lifelong earnings and training. Almost all the stages in the life cycle are tracked from early childhood to stages late in the working life: firstly the characteristics and effects of schooling systems, then the transitions from school to work and, finally, human capital and the working career. Academics and researchers of European studies, labour economics and the economics of education will all find this novel and analytically sound book of interest, as will sociologists and policymakers in Europe.

Life Cycle Inventory Analysis Jul 07 2020 Life Cycle Inventory (LCI) Analysis is the second phase in the Life Cycle Assessment (LCA) framework. Since the first attempts to formalize life cycle assessment in the early 1970, life cycle inventory analysis has been a central part. Chapter 1 "Introduction to Life Cycle Inventory Analysis" discusses the history of inventory analysis from the 1970s through SETAC and the ISO standard. In Chapter 2 "Principles of Life Cycle Inventory Modeling", the general principles of setting up an LCI model and LCI analysis are described by introducing the core LCI model and extensions that allow addressing reality better. Chapter 3 "Development of Unit Process Datasets" shows that developing unit processes of high quality and transparency is not a trivial task, but is crucial for high-quality LCA studies. Chapter 4 "Multi-functionality in Life Cycle Inventory Analysis: Approaches and Solutions" describes how multi-functional processes can be identified. In Chapter 5 "Data Quality in Life Cycle Inventories", the quality of data gathered and used in LCI analysis is discussed. State-of-the-art indicators to assess data quality in LCA are described and the fitness for purpose concept is introduced. Chapter 6 "Life Cycle Inventory Data and Databases" follows up on the topic of LCI data and provides a state-of-the-art description of LCI databases. It describes differences between foreground and background data, recommendations for starting a database, data exchange and quality assurance concepts for databases, as well as the scientific basis of LCI databases. Chapter 7 "Algorithms of Life Cycle Inventory Analysis" provides the mathematical models underpinning the LCI. Since Heijungs and Suh (2002), this is the first time that this aspect of LCA has been fundamentally presented. In Chapter 8 "Inventory Indicators in Life Cycle Assessment", the use of LCI data to create aggregated environmental and resource indicators is described. Such indicators include the cumulative energy demand and various water use indicators. Chapter 9 "The Link Between Life Cycle Inventory Analysis and Life Cycle Impact Assessment" uses four examples to discuss the link between LCI analysis and LCIA. A clear and relevant link between these phases is crucial.
