**Information Operations: Doctrine, Tactics, Techniques, and Procedures (FM 3-13 / 100-6)** Aug 07 2020 Information is an element of combat power. Commanders conduct information operations (IO) to apply it. Focused IO-synchronized with effective information management and intelligence, surveillance, and reconnaissance-enable commanders to gain and maintain information superiority. IO is a prime means for achieving information superiority. Users of FM 3-13 must be familiar with the military decision making process established in FM 5-0, Army Planning and Orders Production; the operations process, established in FM 3-0, Operations; and commander's visualization, described in FM 6-0, Mission Command: Command and Control of Army Forces. As the Army's key integrating manual for IO, this manual prescribes IO doctrine and tactics, techniques, and procedures (TTP). It also establishes doctrine and TTP for the IO elements of operations security and military

in JP 3-13, Joint Doctrine for Information Operations; JP 3-54, Joint Doctrine for Operations Security; and JP 3-58, Joint Doctrine for Military Deception. This manual establishes the following as the definition of IO used by Army forces: Information operations is the employment of the core capabilities of electronic warfare, computer network operations, psychological operations, military deception, and operations security, in concert with specified supporting and related capabilities, to affect or defend information and information systems, and to influence decision making. This definition supersedes the definition of IO in FM 3-0. It is consistent with joint initiatives.

### **ATP 3-18.14 Special Forces Vehicle-Mounted Operations Tactics, Techniques, and Procedures** Mar 02 2020

Until the mid-1980s, the US Army lacked a dedicated mounted special operations capability. Recognizing that traditionally dismounted Special Forces operations in desert environments were unrealistic, the 1st Special Operations Command and the 5th Special Forces Group (SFG) authorized the formation of two elements in 1984 in order to develop mounted doctrine and operational techniques. Elements of Company A, 1st Battalion, 5th SFG, moved to Fort Bliss, Texas, and, in the autumn of 1986, began to fulfil this mission. Early detachments were equipped with M880 trucks and M151 jeeps. Later, they appraised, evaluated, and accepted the high-mobility multipurpose wheeled vehicle (HMMWV) as the interim desert mobility vehicle. In October 1987, A 1/5th SFG produced a summary of the lessons learned between 1985 and 1987. The initial intent of the compendium was to provide a reference for the training and employment of mounted SF detachments within 5th SFG. Standard operating procedures (SOPs) and lessons learned from both 3rd SFG and 5th SFG were incorporated, and procedures for new or improved equipment

essentially unchanged, revisions were necessary to account for equipment updates, such as the new ground mobility vehicle (GMV) and Global Positioning System (GPS) devices. This ATP encompasses the tactics, techniques, procedures, and lessons learned by personnel at Fort Bliss, Fort Campbell, Fort Bragg, and overseas, as well as data extracted from Operations DESERT SHIELD, DESERT STORM, RESTORE HOPE, PROVIDE DEMOCRACY, ENDURING FREEDOM, and IRAQI FREEDOM. This ATP is designed primarily to serve as a reference for the training and employment of mounted SF detachments operating in desert terrain during long-term, unassisted operations; however, the information in this ATP may also be applied to any SF long-range vehicular operation. As with all doctrinal manuals, ATP 3-18.14 is authoritative but not directive. It serves as a guide and does not preclude SF units from developing their own SOPs to meet their needs.

The book uses the term Botnet as a metaphor for the evolving changes represented by this underground economy. Copiously illustrated, this engaging and engrossing book explores the state of threats present in the cyber fraud underground. It discusses phishing and pharming, trojans and toolkits, direct threats, pump-and-dump scams, and other fraud-related activities of the booming cyber-underground economy. By examining the geopolitical and socio-economic foundations of a cyber threat landscape, the book specifically examines telecommunications infrastructure development, patterns and trends of internet adoption and use, profiles of specific malicious actors, threat types, and trends in these areas. This eye-opening work includes a variety of case studies — including the cyber threat landscape in Russia and Brazil. An in-depth discussion is provided on the Russian Business Network's (RBN) role in global cyber crime as well as new evidence on how these criminals steal, package, buy, sell, and profit from the personal financial information of consumers. Armed with this invaluable information, organizations and individuals will be better able to secure their systems and develop countermeasures to disrupt underground fraud.

*Hacking Connected Cars* Jul 18 2021 A field manual on contextualizing cyber threats, vulnerabilities, and risks to connected cars through penetration testing and risk assessment

*Hacking Connected Cars* deconstructs the tactics, techniques, and procedures (TTPs) used to hack into connected cars and autonomous vehicles to help you identify and mitigate vulnerabilities affecting cyber-physical vehicles. Written by a veteran of risk management and penetration testing of IoT devices and connected cars, this book provides a detailed account of how to perform penetration testing, threat modeling, and risk assessments of telematics control units and infotainment systems. This book demonstrates how vulnerabilities in wireless networking, Bluetooth, and GSM can be exploited to affect confidentiality, integrity, and availability of connected cars. Passenger vehicles have experienced a massive increase in connectivity over the past five years, and the trend will only continue to grow with the expansion of The Internet of Things and increasing consumer demand for always-on connectivity. Manufacturers and OEMs need the ability to push updates without requiring service visits, but this leaves the vehicle's systems open to attack. This book examines the issues in depth, providing cutting-edge preventative tactics that security practitioners, researchers, and vendors can use to keep connected cars safe without sacrificing connectivity. Perform penetration testing of infotainment systems and telematics control units through a step-by-step methodical guide Analyze risk levels surrounding vulnerabilities and threats that impact confidentiality, integrity, and availability Conduct penetration testing using the same tactics, techniques, and procedures used by hackers From relatively small features such as automatic

connected systems are vulnerable to attack. As connectivity becomes a way of life, the need for security expertise for in-vehicle systems is becoming increasingly urgent. Hacking Connected Cars provides practical, comprehensive guidance for keeping these vehicles secure.

*Tactics, Techniques, and Procedures for Fire Support for Brigade Operations (Light) (FM 6-20-50)* Sep 27 2019 The purpose of this publication is to provide light forces fire support officers and enlisted personnel at maneuver company, battalion, and brigade with a how-to manual. It focuses on fire support officers (FSOs) in light infantry, airborne infantry, air assault infantry, and infantry at brigade and below. This publication, "Tactics, Techniques, and Procedures for Fire Support for Brigade Operations (Light) (FM 6-20-50)," describes maneuver techniques and fire support considerations. It establishes responsibilities and duties of key personnel by focusing on how the fire support system can support the ground-gaining arms. This manual is not a substitute for doctrinal literature, Maneuver and fire support doctrine should be studied in depth to obtain a complete understanding of doctrine, tactics, and techniques. That basic understanding is a must in order to effectively apply the contents of this how-to manual. The manual is fully compatible with the Army's AirLand Battle doctrine and is consistent with current joint and combined doctrine. It assumes that the user has a fundamental understanding of the fire support principles set forth in FM 6-20.
