Manual of Canine and Feline Cardiology Nov 09 2020 The most effective, practical approach to the recognition and management of

cardiovascular and cardiopulmonary medicine, **MANUAL OF CANINE AND FELINE CARDIOLOGY**, 4th Edition takes a user-friendly approach to the challenges and conditions you encounter in everyday practice. This completely revised and updated edition includes vital information on diagnostic modalities and techniques, therapeutic options, surgical procedures, and pharmaceutical management of the dog and cat cardiac patient. This invaluable, practical reference covers the full breadth of canine and feline cardiology diagnosis and management in a straightforward and clinically focused format. Covers common cardiovascular disorders and practical treatment methods for cardiac failure, cardiac arrhythmias, conduction disturbances, cardiopulmonary arrest, as well as procedures for resuscitation. Includes numerous reproductions of electrocardiograms, thoracic radiographs, and pressure curves. Vibrant, full-color format helps important material stand out and includes vivid illustrations to aid in diagnosis and treatment. A user-friendly format with bullet points, tables, key points, and boxes offers at-a-glance access to key information. Cardiac Surgery chapter provides illustrated, step-by-step coverage of cardiovascular surgical procedures and techniques. Chapters on Pacemaker Therapy and Cor Pulmonale and Pulmonary Thromboembolism expand the scope of coverage. A completely updated drug formulary presents the most current therapies used to pharmacologically manage cardiovascular disease. Twenty-nine expert contributors share their knowledge and clinical exposure to ensure you are using the most trustworthy and up-to-date information available.

[Applying Data Science](#) May 16 2021 See how data science can answer the questions your business faces! **Applying Data Science: Business Case Studies Using SAS**, by Gerhard Svolba, shows you the benefits of analytics, how to gain more insight into your data, and how to make better decisions. In eight entertaining and real-world case studies, Svolba combines data science and advanced

analytics with business questions, illustrating them with data and SAS code. The case studies range from a variety of fields, including performing headcount survival analysis for employee retention, forecasting the demand for new projects, using Monte Carlo simulation to understand outcome distribution, among other topics. The data science methods covered include Kaplan-Meier estimates, Cox Proportional Hazard Regression, ARIMA models, Poisson regression, imputation of missing values, variable clustering, and much more! Written for business analysts, statisticians, data miners, data scientists, and SAS programmers, *Applying Data Science* bridges the gap between high-level, business-focused books that skimp on the details and technical books that only show SAS code with no business context.

Mimesis and Science Dec 11 2020 This exciting compendium brings together, for the first time, some of the foremost scholars of René Girard's mimetic theory, with leading imitation researchers from the cognitive, developmental, and neuro sciences. These chapters explore some of the major discoveries and developments concerning the foundational, yet previously overlooked, role of imitation in human life, revealing the unique theoretical links that can now be made from the neural basis of social interaction to the structure and evolution of human culture and religion. Together, mimetic scholars and imitation researchers are on the cutting edge of some of the most important breakthroughs in understanding the distinctive human capacity for both incredible acts of empathy and compassion as well as mass antipathy and violence. As a result, this interdisciplinary volume promises to help shed light on some of the most pressing and complex questions of our contemporary world.

Apes and Human Evolution Jan 12 2021 Russell Tuttle synthesizes a vast literature in primate evolution and behavior to explain how apes and humans evolved in relation to one another and why humans became a bipedal, tool-making, culture-inventing species distinct from other hominoids. He refutes the theory that we

are sophisticated, instinctively aggressive and destructive killer apes.

Advances in the Study of Behavior Feb 10 2021 The aim of *Advances in the Study of Behavior* remains as it has been since the series began: to serve the increasing number of scientists who are engaged in the study of animal behavior by presenting their theoretical ideas and research to their colleagues and to those in neighboring fields. We hope that the series will continue its "contribution to the development of the field", as its intended role was phrased in the Preface to the first volume in 1965. Since that time, traditional areas of animal behavior have achieved new vigor by the links they have formed with related fields and by the closer relationship that now exists between those studying animal and human subjects. *Advances in the Study of Behavior, Volume 31* continues to serve scientists across a wide spectrum of disciplines. Focusing on new theories and research developments with respect to behavioral ecology, evolutionary biology, and comparative psychology, these volumes foster cooperation and communications in these dense fields.

Technical Manual May 28 2022

Imitation in Animals and Artifacts Jul 06 2020 An interdisciplinary overview of current research on imitation in animals and artifacts.

The Origins of Grammar Oct 21 2021 The second in James Hurford's acclaimed two-volume exploration of the biological evolution of language explores the evolutionary and cultural preconditions and consequences of humanity's great leap into language.

Mirrors in the Brain Mar 14 2021 When we witness a great actor, musician, or sportsperson performing, we share something of their experience. It becomes clear just how this sharing of experience is realized within the human brain. This text provides an accessible overview of mirror neurons, written by the man who first discovered them.

Manual of Canine and Feline Cardiology Apr 02 2020 The most effective, practical approach to the recognition and management of cardiovascular and cardiopulmonary medicine, *Manual of Canine and Feline Cardiology*, 5th Edition walks readers through the challenges and conditions encountered in everyday practice. This completely revised and updated edition includes vital information on diagnostic modalities and techniques, therapeutic options, surgical procedures, and pharmaceutical management of the dog and cat cardiac patient. A new chapter on genetic and biomarker testing and a new chapter on nutrition surrounding cardiovascular disease ensure practitioners are well-equipped to handle every aspect of cardiac care in small animals. The latest coverage on common cardiovascular disorders and practical treatment methods addresses topics, such as: cardiac failure, cardiac arrhythmias, conduction disturbances, cardiopulmonary arrest, and more. Easy-to-follow organization separates content into three sections that build on each other - Section 1: Diagnosis of Heart Disease; Section 2: Cardiovascular Disease; Section 3: Treatment of Cardiovascular Disease. Extensive art program contains vivid illustrations, clinical photographs, and color Doppler images. Drug formulary appendix features a list of commonly used cardiopulmonary drugs, along with formulations, indications, and dosages (for both dogs and cats). Streamlined text, bullet points, and helpful boxes help to highlight the most important clinical content. Highlighted key points spotlight key information, diagnosis considerations, clinical tips and more. NEW! Genetic and Biomarker Testing of Cardiovascular Diseases chapter covers genetic testing for mutations associated with specific cardiac diseases and testing for circulating substances indicative of heart disease or injury. NEW! Nutrition and Cardiovascular Disease chapter focuses on the significant role nutrition can play in preventing or treating cardiac disease. NEW! Significantly revised Echocardiography chapter features the latest information on

indications and the role of the electrocardiogram in clinical practice. NEW! All new doppler echocardiogram images in the Feline Cardiomyopathy chapter show the primary cardiomyopathies, including: severe hypertrophic cardiomyopathy, severe hypertrophic obstructive cardiomyopathy, severe dilated cardiomyopathy, severe endomyocardial fibrosis and restrictive cardiomyopathy, severe unclassified cardiomyopathy, and severe arrhythmogenic right ventricular cardiomyopathy. NEW! Section on hybrid cardiac procedures in the Cardiac Surgery chapter include image-guided catheter-based interventions with direct transcatheter (transatrial, transventricular, transapical) surgical approaches to the heart.

Perspectives on Imitation, Volume 1 Nov 21 2021 A state-of-the-art view of imitation from leading researchers in neuroscience and brain imaging, animal and developmental psychology, primatology, ethology, philosophy, anthropology, media studies, economics, sociology, education, and law. Leading researchers across a range of disciplines provide a state-of-the-art view of imitation, integrating the latest findings and theories with reviews of seminal work, and revealing why imitation is a topic of such intense current scientific interest.

Hormone Repair Manual Jun 24 2019 The Hormone Repair Manual is a must-have guide to understanding and overcoming the symptoms of perimenopause and menopause. Naturopath Lara Briden, author of the international bestseller Period Repair Manual, has more than 20 years' experience in women's health. Her fresh approach aims to overturn the stigma of perimenopause and menopause and show women that:- many symptoms are temporary and manageable - emotional challenges can present an opportunity to thrive- a focus on health during this period can bring benefits for years to come. Addressing common symptoms such as hot flashes, insomnia, mood changes, migraines, weight gain, low libido and heavy periods, Lara offers practical solutions of diet, lifestyle, nutritional supplements and tips for how to speak to your doctor

about hormone therapy. The Hormone Repair Manual is backed by evidence-based research and case studies and is a reassuring guide to soothing, nourishing and strengthening your body, mind and spirit during this time of change.

Understanding Events Nov 29 2019 We effortlessly recognize all sorts of events--from simple events like people walking to complex events like leaves blowing in the wind. We can also remember and describe these events, and in general, react appropriately to them, for example, in avoiding an approaching object. Our phenomenal ease interacting with events belies the complexity of the underlying processes we use to deal with them. Driven by an interest in these complex processes, research on event perception has been growing rapidly. Events are the basis of all experience, so understanding how humans perceive, represent, and act on them will have a significant impact on many areas of psychology. Unfortunately, much of the research on event perception--in visual perception, motor control, linguistics, and computer science--has progressed without much interaction. This volume is the first to bring together computational, neurological, and psychological research on how humans detect, classify, remember, and act on events. The book will provide professional and student researchers with a comprehensive collection of the latest research in these diverse fields.

InfoWorld Jun 28 2022 InfoWorld is targeted to Senior IT professionals. Content is segmented into Channels and Topic Centers. InfoWorld also celebrates people, companies, and projects.

The Symbolic Species Evolved Mar 26 2022 This anthology is a compilation of the best contributions from Symbolic Species Conferences I, II (which took place in 2006, 2007). In 1997 the American anthropologist Terrence Deacon published *The Symbolic Species: The Coevolution of Language and the Brain*. The book is widely considered a seminal work in the subject of evolutionary cognition. However, Deacon's book was the first step – further steps have had to be taken. The proposed anthology is such an important

associate. The contributions are written by a wide variety of scholars each with a unique view on evolutionary cognition and the questions raised by Terrence Deacon - emergence in evolution, the origin of language, the semiotic 'missing link', Peirce's semiotics in evolution and biology, biosemiotics, evolutionary cognition, Baldwinian evolution, the neuroscience of linguistic capacities as well as phylogeny of the homo species, primatology, embodied cognition and knowledge types.

Child and Adolescent Development Jan 30 2020 This advanced text for psychology, human development, and education provides students with state-of-the-art overviews of the discipline in an accessible, affordable format. Unique both in the depth of its coverage and in the timeliness of the research that it presents, this comprehensive text conveys the field of child and adolescent development through the voices of scientists who themselves are now shaping the field.

Issues in Diagnostics and Imaging: 2013 Edition Aug 19 2021

Issues in Diagnostics and Imaging / 2013 Edition is a ScholarlyEditions™ book that delivers timely, authoritative, and comprehensive information about Diagnostic and Interventional Radiology. The editors have built Issues in Diagnostics and Imaging: 2013 Edition on the vast information databases of ScholarlyNews.™ You can expect the information about Diagnostic and Interventional Radiology in this book to be deeper than what you can access anywhere else, as well as consistently reliable, authoritative, informed, and relevant. The content of Issues in Diagnostics and Imaging: 2013 Edition has been produced by the world's leading scientists, engineers, analysts, research institutions, and companies. All of the content is from peer-reviewed sources, and all of it is written, assembled, and edited by the editors at ScholarlyEditions™ and available exclusively from us. You now have a source you can cite with authority, confidence, and

credibility. More information is available at <http://www.ScholarlyEditions.com/>.

The Emergence of Personhood Apr 26 2022 Despite the many well-documented similarities -- genetic, cognitive, behavioral, social -- between our human selves and our evolutionary forebears, a significant gulf remains between us and them. Why is that? How did it come about? And how did we come to be the way we are? In this book fourteen distinguished scholars -- including humanist, atheist, and theist voices -- address such questions as they explore how and when human personhood emerged. Representing various disciplines, the contributors all offer significant insights into new scientific research about the origins of human nature -- research that challenges some traditional views. CONTRIBUTORS Francisco J. Ayala Justin L. Barrett Roy F. Baumeister Warren S. Brown Richard W. Byrne Matthew J. Jarvinen Malcolm Jeeves Timothy O'Connor Lynn K. Paul Colin Renfrew Ian Tattersall Anthony C. Thiselton Alan J. Torrance Adam Zeman

The Original Manuals of Noble Ape Nov 02 2022 The Noble Ape Simulation was originally developed in 1996 as a biological and cognitive simulation. It was very basic and showed a graphical representation of an island populated with Noble Apes through a simple contour map. The initial development was done in Australia and Malaysia. The early development had considerable documentation. The documentation gave it a weight of interest, the software alone did not have. This is that documentation.

The Genealogy of Aesthetics Sep 07 2020 Is it body or spirit that makes us appreciate beauty and create art? The distinguished Canadian critic Ekbert Faas argues that, with occasional exceptions

like Montaigne and Mandeville, the mainstream of western thinking about beauty from Plato onwards has overemphasised the spirit, or even execrated the body and sexuality as inimical to the aesthetic disposition. The Genealogy of Aesthetics redresses this imbalance via a radical re-reading of seminal thinkers like Plato, Augustine, Kant, Hegel, Marx, Heidegger and Derrida. Professor Faas attacks both the traditional and postmodern consensus, and offers a new pro-sensualist aesthetics, heavily influenced by Nietzsche, that draws on contemporary neo-Darwinian cognitive science. A work of both polemic and considerable learning, The Genealogy of Aesthetics marks a radical new departure in thinking about art, of interest to all serious students of the humanities and cognitive sciences, which no future work in this field can afford to ignore.

Gorilla Biology Sep 27 2019 Gorillas are one of our closest living relatives, the largest of all living primates, and teeter on the brink of extinction. These fascinating animals are the focus of this in-depth and comprehensive examination of gorilla biology. Gorilla Biology combines recent research in morphology, genetics and behavioural ecology to reveal the complexity and diversity of gorilla populations. The first section focuses on morphological and molecular variation and underscores the importance of understanding diverse biological patterns at all levels in testing evolutionary and adaptive hypotheses and elucidating subspecies and species diversification. Following are discussions of the ecological constraints that influence gorilla social organization and highlight their surprising flexibility. The book ends with discussions of the conservation status of gorillas and the many and increasing threats to their continued survival. Giving insight into the evolutionary biology of these unique primates, this book will be essential reading for primatologists, anthropologists and evolutionary biologists.

Sanitation in Food Processing Mar 02 2020 Sanitation in Food Processing is a guide to food process sanitation, which illustrates the

principles with timely examples. It discusses the importance of training in food-plant sanitation programs, as well as regulatory programs relating to all aspects of food plant sanitation, including Hazard Analysis Critical Control Point (HACCP), the construction and design of food plants, and prevention of food-borne diseases. Comprised of 19 chapters, this volume begins with an overview of sanitation in food processing, good sanitation practices, and the ways to establish a successful food sanitation program. It then discusses factors to consider in the design and construction of food plants; sanitary design and operation of food processing and service equipment; microbial growth in foods; the importance of personal hygiene; and significant insects in the food industry. The reader is also introduced to ways of controlling insects, rodents, and birds in the food environment, while other chapters address sanitation in food packaging, storage, and transport. The book concludes with a summary of food laws and regulations. This book is a valuable resource for undergraduate and postgraduate students, food sanitarians, and others in the food-processing industry who want to learn more about the ways and means of ensuring the quality and safety of the food we eat.

Function, Phylogeny, and Fossils Jul 18 2021 An insightful new work, *Function, Phylogeny, and Fossils* integrates two practices in paleobiology which are often separated - functional and phylogenetic analysis. The book summarizes the evidence on paleoenvironments at the most important Miocene hominoid sites and relates it to the pertinent fossil record. The contributors present the most up-to-date statements on the functional anatomy and likely behavior of the best known hominoids of this crucial period of ape and human evolution. A key feature is a comprehensive table listing 240 characteristics among 13 genera of living and extinct hominoids.

From Biped to Strider Jul 26 2019 The inspiration for this volume of contributed papers stemmed from conversations between the editors in front of Chuck Hilton's poster on the determinants of hominid walking speed, presented at the 1998 meetings of the American Association of Physical Anthropologists (AAPA). Earlier at those meetings, Jeff Meldrum (with Roshna Wunderlich) had presented an alternate interpretation of the Laetoli footprints based on evidence of midfoot flexibility. As the discussion ensued we found convergence on a number of ideas about the nature of the evolution of modern human walking. From the continuation of that dialogue grew the proposal for a symposium which we called *From Biped to Strider: the Emergence of Modern Human Walking*. The symposium was held as a session of the 69th annual meeting of the AAPA, held in San Antonio, Texas in 2000. It seemed to us that the study of human bipedalism had become overshadowed by the often polarized debates over whether australo pitheciines were wholly terrestrial in habit, or retained a significant degree of arboreality.

Human Growth in the Past Aug 26 2019 An interdisciplinary analysis of human growth in past populations, first published in 1999.

InfoWorld Aug 07 2020

Entangled Life Jan 24 2022 This volume explores the interactions between organisms and their environments and how this “entanglement” is a fundamental aspect of all life. It brings together the work and ideas of historians, philosophers, biologists, and social scientists, uniting a range of new perspectives, methods, and frameworks for examining and understanding the ways that organisms and environments interact. The volume is organized into three main sections: historical perspectives, contested models, and

emerging frameworks. The first section explores the origins of the modern idea of organism-environment interaction in the mid-nineteenth century and its development by later psychologists and anthropologists. In the second section, a variety of controversial models—from mathematical representations of evolution to model organisms in medical research—are discussed and reframed in light of recent questions about the interplay between organisms and environment. The third section investigates several new ideas that have the potential to reshape key aspects of the biological and social sciences. Populations of organisms evolve in response to changing environments; bodies and minds depend on a wide array of circumstances for their development; cultures create complex relationships with the natural world even as they alter it irrevocably. The chapters in this volume share a commitment to unraveling the mysteries of this entangled life.

Motion Encoding in Language and Space Oct 28 2019 This book brings together researchers in linguistics, computer science, psychology and cognitive science to investigate how motion is encoded in language. Part I considers the parameters of the field, while part II looks at the way in which spatial scale or granularity plays a role in the encoding of motion in language.

Folk Psychological Narratives Dec 31 2019 An argument that challenges the dominant "theory theory" and simulation theory approaches to folk psychology by claiming that our everyday

understanding of intentional actions done for reasons is acquired by exposure to and engaging in specific kinds of narratives. Established wisdom in cognitive science holds that the everyday folk psychological abilities of humans—our capacity to understand intentional actions performed for reasons—are inherited from our evolutionary forebears. In *Folk Psychological Narratives*, Daniel Hutto challenges this view (held in somewhat different forms by the two dominant approaches, "theory theory" and simulation theory) and argues for the sociocultural basis of this familiar ability. He makes a detailed case for the idea that the way we make sense of intentional actions essentially involves the construction of narratives about particular persons. Moreover he argues that children acquire this practical skill only by being exposed to and engaging in a distinctive kind of narrative practice. Hutto calls this developmental proposal the narrative practice hypothesis (NPH). Its core claim is that direct encounters with stories about persons who act for reasons (that is, folk psychological narratives) supply children with both the basic structure of folk psychology and the norm-governed possibilities for wielding it in practice. In making a strong case for the as yet underexamined idea that our understanding of reasons may be socioculturally grounded, Hutto not only advances and explicates the claims of the NPH, but he also challenges certain widely held assumptions. In this way, *Folk Psychological Narratives* both clears conceptual space around the dominant approaches for an alternative and offers a groundbreaking proposal.
