Digital Communications with Emphasis on Data Modems Oct 09 2020 This book uses a

practical approach in the application of theoretical concepts to digital communications in the design of software defined radio modems. This book discusses the design, implementation and performance verification of waveforms and algorithms appropriate for digital data modulation and demodulation in modern communication systems. Using a building-block approach, the author provides an introductory to the advanced understanding of acquisition and data detection using source and executable simulation code to validate the communication system performance with respect to theory and design specifications. The author focuses on theoretical analysis, algorithm design, firmware and software designs and subsystem and system testing. This book treats system designs with a variety of channel characteristics from very low to optical frequencies. This book offers system analysis and subsystem implementation options for acquisition and data detection appropriate to the channel conditions and system specifications, and provides test methods for demonstrating system performance. This book also: Outlines fundamental system requirements and related analysis that must be established prior to a detailed subsystem design Includes many examples that highlight various analytical solutions and case studies that characterize various system performance measures Discusses various aspects of atmospheric

A Radio Channel Load Distribution Analyzer for Use in Studies of

Communication Flow in Radar Approach Control Centers

Aug 07 2020 "The Radio Channel Load Distribution Analyzer described in this report was developed in order to obtain measures of frequency of use and time-in-use of radio channels in a radar approach control center.

Essentially, the device consists of 110 impulse counters arranged in pairs. One of the counters of a pair records the frequency of use of a channel; the second counter records cumulative time-in-use of the same channel. Since more than one controller position can use the same channel, separate instrumentation is required for each control position. Micro-switches associated with the radio channel key switches of each AN/FSA-4 control console serve to select the appropriate counting circuits.
